

### Questions

GC 25/5: what does an empty value in the "Place.of.Death" column in the "ChildDemographic.csv" table means? That the child is still alive? That she died at home? That we don't know?

GC 30/5: how should we interpret the datetime columns that have 1800-something as year? (e.g. in "ActivityInvitees.csv") Perhaps we should ignore the dates and take the time only?

GC 30/5: why does the "ChristophersVisitRecords.csv" table includes visit to other hospices, too?

GC 31/5: what does "This hospice" refer to in the "Place.of.Death" column of "ChildDemographic.csv"?

### Answers

That the child is still alive. There will be a Date of Birth, followed by a Date of Death and if the Date of Death is not there then we are not aware that the child has died.

In ActivityTable.csv just take the time in timestart and time end. Not sure why date stamp showing as 1899. Staff just type in a time

- Shooting Star CHASE has two separate hospices. One is called Christopher's the other is Shooting Star House. This field indicates which hospice the child was visiting

- GC: ok so you mean that the table name is irrelevant, this is about all hospices

- PE: Yes, when the database was first created there was only Christophers and the name of the table was never changed as it was too ingrained

This Hospice' was a generic term originally used to specify that the child died at either Christophers or Shooting Star House rather than another hospice.
